Suitable initiator compounds basically include "all organic compounds having at least one nucleophilically displaceable leaving group" (page 9, lines 10 to 12). Preferred compounds conform to (for example) the general formulas 1-A to 1-D on page 10 of D1. The use of the compounds described in the present application is not mentioned in D1, and therefore the subject matter of claim 1 is novel (PCT Article 33(2)). | | |

Box No. V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;

invention is that of providing alternative initiator compounds for the cationic polymerisation of ethylenically unsaturated monomers.

The solution proposed in claim 1 of the application involves an inventive step (PCT Article 33(3)) because there is nothing in either document D1 or document D2 that might suggest to a person skilled in the art that the aforementioned problem can be solved by the compounds specified in claim 1.
